

Password Reset Guide

Example Platform | Customer Support Knowledge Base | Version 2.4

1. Overview

This guide walks you through every available method to reset your Example Platform password. Whether you forgot your password, suspect unauthorized access, or simply need to rotate credentials for security compliance, this document covers all scenarios step-by-step.

2. Standard Self-Service Password Reset

This is the fastest method if you have access to your registered email address.

1. Go to the login page: <https://platform.example.com/login>
2. Click the "Forgot Password?" link below the login form.
3. Enter the email address associated with your account and click Submit.
4. Check your inbox for an email with subject: "Reset Your Example Platform Password" (may take up to 2 minutes).
5. Click the "Reset Password" button inside the email. The link is valid for 30 minutes.
6. Enter your new password. Requirements:
 - Minimum 10 characters
 - At least one uppercase letter (A-Z)
 - At least one lowercase letter (a-z)
 - At least one number (0-9)
 - At least one special character (!@#\$%^&*)
 - Cannot be the same as any of your last 5 passwords
7. Confirm the new password and click "Set New Password".
8. You will be redirected to the login page. Sign in with your new password.

Note: After a successful reset, all existing sessions on other devices are automatically terminated for security.

Password Reset Guide

3. SSO (Single Sign-On) Account Password Reset

If your organization uses SSO (Google Workspace, Microsoft Azure AD, Okta, etc.), your password is managed by your identity provider, NOT by Example Platform.

1. Contact your IT administrator or help desk.
2. Request a password reset through your organization's identity provider.
3. Once reset at the identity provider level, return to <https://platform.example.com> and log in via SSO.

Example Platform support cannot reset SSO-managed passwords. Your IT team controls those credentials.

4. Reset When Locked Out Due to 2FA

If you have lost access to your 2FA device (phone, authenticator app):

1. On the 2FA prompt page, click "Use a Backup Code".
2. Enter one of the 10 backup codes you saved during initial 2FA setup.
3. Each backup code can be used only once.

If you do not have backup codes:

- Email security@example.com with subject: 2FA RECOVERY REQUEST
- Provide: account email, last 4 digits of billing card, approximate account creation date
- Identity verification will be required
- Processing time: 1-2 business days

Account administrators can reset passwords for team members:

1. Log into your admin account at <https://platform.example.com>
2. Navigate to Admin Panel > Team > Users.
3. Find the user by name or email.
4. Click the user row and select "Reset Password".
5. Choose: Send Reset Email (user receives reset link) or Set Temporary Password (admin sets a temp password).
6. If setting a temporary password, the user will be forced to change it on next login.

6. Troubleshooting Reset Issues

Reset email not received:

- Check your spam/junk folder
- Ensure you used the exact email registered with the account
- Wait 5 minutes before requesting another reset (to avoid spam filters)
- Add noreply@example.com to your contacts/allowlist
- Check with your IT team if corporate email filtering may be blocking the message

Password Reset Guide

Reset link expired:

- Reset links are valid for 30 minutes only
- Return to the login page and request a new reset link

"New password not accepted" error:

- Ensure all password requirements are met (see Section 2, Step 6)
- Clear your browser cache and try again in a private/incognito window
- Try a different browser

Password Reset Guide

7. Password Security Best Practices

After resetting your password, follow these best practices to keep your account secure:

- Use a password manager (1Password, Bitwarden, LastPass) to generate and store strong unique passwords
- Never reuse passwords across multiple services
- Enable Two-Factor Authentication (2FA) at Settings > Security > Two-Factor Authentication
- Rotate your password every 90 days if handling sensitive data
- Never share your password with support agents (we will never ask for it)
- Sign out of shared or public computers after each session

If you suspect your account has been compromised, reset your password immediately and contact security@example.com.

8. Contact Support

If you are unable to reset your password using the methods above, contact our support team:

- Email: support@example.com
- Chat: Available in the platform dashboard (Professional/Enterprise plans)
- Phone: 1-800-EXAMPLE (Enterprise only, Mon-Fri 9AM-6PM EST)

When contacting support, have ready: your account email, approximate date of last successful login, and any error messages received.
